

HARDWARE AND SOFTWARE INTEGRATION

Step by step for implementation:

- 1) Use RFID module to check the matching of the tags.
- 2) If the tags is matched, it goes further to check.
- 3) If the tags is not matched, ignition line id cut off.
- 4) If vehicular movement is detected, it will send sms and call alert to the owner.
- 5) If vehicular movement is not detected, it will further check for tags.
